

# Agriculture & Agribusiness

Modern agriculture faces the challenge of combining traditional work processes with technical solutions in order to increase yields, efficiency and working comfort.

From farms and large agricultural businesses to industrial feed or seed processing, robust, reliable and flexible conveyor systems and transport equipment are in demand.

Our specially developed lift tables, transport equipment and chain hoists are used in numerous areas of the agricultural industry, for example in harvest handling, feed processing or stationary grain conveying. They offer maximum load capacity, easy handling and an adaptable design for a wide range of application scenarios.

## Challenges in agriculture & the agricultural industry

Daily work in agricultural businesses and the agricultural industry is characterised by changing materials, heavy loads, harsh environmental conditions and often limited space. Technical systems must not only be reliable, but also easy to operate and durable.

### Typical challenges:

Conveying bulk materials such as grain, seeds or fertilisers  
Handling heavy containers, machine components or feed containers  
Use in dusty, damp or uneven conditions (e.g. stables, silos, outdoor storage areas)  
Integration into existing farm structures without costly conversion  
Ergonomic conveyor for manual work processes

Our solutions for agricultural and rural technology offer maximum functionality and are modular, mobile and tailored to the needs of agricultural businesses. In addition, we ensure that they are easy to operate and maintain.

## Solutions for agricultural businesses and agriculture

- **Lifting tables for harvesting and feed processing:** Our lifting tables are designed for use in grain and seed storage facilities, feed processing plants or for unloading heavy containers. They enable ergonomic working thanks to stepless height adjustment – even with heavy loads. Variants with galvanised frames or stainless steel components are ideal for damp or corrosion-critical environments.

- **Transport equipment for stables, warehouses and farm logistics:** Robust platform trucks with high ground clearance, shock-resistant wheels and a load-bearing design are ideal for internal transport on farms, whether you are transporting feed sacks, machine parts or boxed goods. Customised designs for use in narrow stable aisles or silo facilities are also available.
- **Chain hoists for vertical conveyor processes in agricultural businesses:** Our manually or electrically operated chain hoists enable the safe lifting of heavy components such as bag silos, machine parts or pallets, for example in feed stores, workshops or machine halls. Stationary or mobile crane traverses can also be combined.
- **Conveyor rollers for the agricultural industry:** We supply conveyor rollers with high load-bearing capacity, dirt-resistant bearing technology and abrasion-resistant coating. These are suitable for grain plants, conveyor belts in fertiliser logistics or mobile conveyor systems for harvesting. Optionally available with galvanised shafts, antistatic properties or sealed bearing units for outdoor use.
- **Components for seed, feed and fertiliser conveying:** Our conveyor technology components are specially designed to meet the requirements of bulk material processing. They convey smooth material transfers, consistent conveyor speeds and can be adapted to different conveyor media. Everything from bags and pellets to organic materials and feed can be conveyed.

### Typical areas of application

- Mechanised harvesting processes and sorting plants
- Grain conveying in warehouses, silos or drying plants
- Material handling in fertiliser logistics and feed processing
- Stable equipment with mobile lifting and hoisting devices
- Farm logistics for agricultural products and machine components

### Technical advantages at a glance

- Lifting tables and chain hoists for agricultural lifting processes
- Conveyor rollers and conveyor technology for crates, pallets, bulk goods and animal feed
- Transport equipment for flexible use on farms, in stables and storage areas
- Weather-resistant materials for use in stables, on farms and outdoors
- Low-maintenance, durable components for continuous agricultural use
- Conveyor solutions for grain, seeds, crops, fertiliser and animal feed

**Contact us and we will develop your individual conveyor solution for agriculture and the agricultural industry.**
